Turf Equipment - AgriMetal Tuff Vac 5000

Model 5000 PTO drive vacuum, w/5 cu. yard cap., & 5 ft wide vac head. Live floor conveyor unloads the hopper quickly & efficiently. AgriMetal's conveyors not only empty the load box, they also scrape the floor clean! Pickup head floats for unparalleled contour following. This unique system uses a double swivel design that lets the head float up, down & left or right, to follow the most demanding terrain. AgriMetal's vac features an exclusive mulching impeller. This means leaves, sticks, cans & bottles are ground up before going into the hopper. It also means you can go a lot farther before emptying! Replaceable wear liner around the inside of the impeller housing is standard equipment. Hydraulically driven sweeper brushes are mounted inside the vacuum head. Hard to vac debris such as pine needles or wet leaves are literally picked up & thrown into the impeller where they are ground into mulch. Brushes are made of wire impregnated rubber fingers that are easily replaced at nominal cost. Brush fingers are staggered for a clean sweep!

1989 Freightliner, cab over, 12,000 lb. front, 40,000 lb. rear, standard hook ups

1975 Ford F-150 Restored with a 4 inch lift. Everything on body was checked over. Has 140some thousand miles.. Has New shocks with a roll in bed liner. 390 4 bbl automatic 4 wheel drive.
